Resistance protects against the symptoms of TuYV: a virus transmitted by aphids which can cause up to 30% yield drop and 3% loss of oils.

Allows the crop to more efficiently utilise available nitrogen, enabling the variety to reach its genetic yield potential even in sub-optimal nitrogen situations.

Resistance helps protect against untimely seed losses around harvest caused by weather or combine passing through the crop.

Is gene-specific resistance to phoma stem canker and is included in combination with quantitative resistance in all our fully loaded hybrids.
