

ASPIRE

BREEDERS REFERENCE: LE15/309 TRIAL STATUS: RECOMMENDED UK

A ROBUST CONVENTIONAL VARIETY WITH TUYV RESISTANCE & CONSISTENT PERFORMANCE IN BOTH TRIALS AND ON FARM.

ANYTHING BUT CONVENTIONAL

KEY STRENGTHS

Only recommended conventional with TuYV

Robust and resilient plant type

Ideally suited to early drilling

Slower speed of development

Consistent performance across all regions of the UK

AGRONOMIC PROFILE

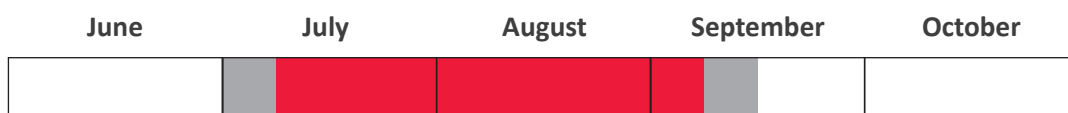

Data from the AHDB Oilseed Rape Recommended List 2021/22. On the 1-9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance). [] = limited data. Agronomic features marked with * are breeders perspective.

Resistance protects against the symptoms of TuYV: a virus transmitted by aphids which can cause up to 30% yield drop and 3% loss of oils.

SOWING WINDOW

Recommended Sowing Period
Potential Sowing Period depending on seasonal conditions

Aspire is the only recommended conventional variety with crucial TuYV resistance. Aspire is a short robust plant type with very good straw characteristics. A solid disease and TuYV resistance means Aspire fits the early drilling option perfectly with its slower speed of development.
