

# HOW TO IMPROVE YOUR STUBBLE TURNIP YIELDS

Getting the most from home-grown forage is important and that is especially true of stubble turnips. Sowing date can make all the difference between producing an excellent crop to an average one, all in the space of 4 weeks!

## 3 THINGS THAT WILL MAKE A BIG DIFFERENCE...

### 1 VARIETY

Choose a high yielding variety, like Samson – a sweet tetraploid variety that will help to increase intakes.

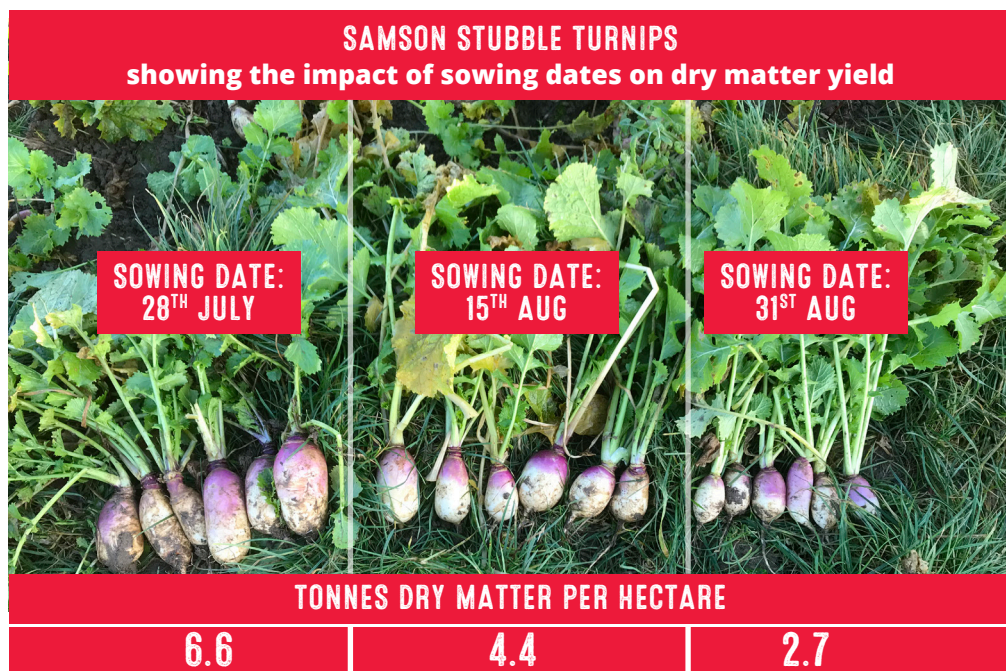

### 2 SOWING DATE

Sow early - 4 weeks makes a big difference! – see UK Trials photos below.

### 3 NITROGEN

Make sure the crops get some N – stubble turnips need feeding, just like any other crop.

UK Trials – demonstrating the significant effect of sowing date on stubble turnip development:

## SEED AVAILABILITY:

 We currently have good stocks of Samson, Delilah and Rondo stubble turnips. Contact us for the latest availability! Seed is supplied either *untreated* in 5kg or 25kg packs, or *treated* with Start-Up to help establishment in 2kg bags.
