AGRONOMIC PROFILE

Data from AHDB RL winter oilseed rape Recommended List 2022/23. On the 1-9 scales, high figures indicate that a variety shows the character to a high degree (e.g. high resistance) characteristics marked with a * are breeders perspective.

Resistance protects against the symptoms of TuYV: a virus transmitted by aphids which can cause up to 30% yield drop and 3% loss of oils.

Gene-specific resistance to phoma stem canker. Included in combination with quantitative resistance in all our fully loaded hybrids.

Resistance helps protect against untimely seed losses around harvest caused by weather or the combine passing through the crop.

SOWING WINDOW
